

Language Access and Digital Trust

Original bilingual research brief for service pages, onboarding and client communication.

Document type	Original research-style portfolio sample
Use	Academic, public information and service communication
Commercial status	Quote-only, non-certified language work
Languages	Spanish, English, German, French, Portuguese, Italian, Russian, Czech, Chinese, Japanese, Hebrew and Arabic; historical samples in Latin, Ancient Greek, Classical Arabic, Sanskrit and Old Norse.

Executive summary

Clear language access improves trust when a digital service asks users to share personal, academic or professional information. This original Scriptorium sample demonstrates how a short research brief can become a practical multilingual asset without pretending to be an external client case.

The key finding is simple: users understand a service faster when the page separates the promise, the scope, the limits and the next action. Translation alone is not enough when the reader also needs orientation, safety and confidence.

Method used for this sample

- A Spanish base text was drafted as a service-information brief.
- The content was adapted into selected modern languages with attention to tone and usage.
- Sensitive claims were removed: no certification, no legal advice and no invented client outcome.
- Terminology was kept stable: access, scope, confidentiality, revision and delivery.

Multilingual excerpt

Language	Localized sample
Spanish	La claridad lingüística reduce fricción cuando el usuario debe compartir información sensible.
English	Clear language reduces friction when users need to share sensitive information.
German	Klare Sprache verringert Reibung, wenn Nutzer sensible Informationen teilen müssen.
French	Un langage clair réduit la friction lorsque l'utilisateur doit partager des informations sensibles.
Portuguese	A linguagem clara reduz atritos quando o usuário precisa compartilhar informações sensíveis.
Italian	Un linguaggio chiaro riduce l'attrito quando l'utente deve condividere informazioni sensibili.
